

sampled frames

Q: Analyze this video and list ALL distinct objects/items visible.

A: object names, natural-language description (material, initial state)

mask prompt

(a) Object Grounding

Classification & Severity

post-verify anomaly frames

****Anomaly Detection report****
 - Video-level anomaly + anomaly types
 - Frame-level anomaly + anomaly frames
 - Object-level anomaly + anomaly states

(c) State-Aware Anomaly Reasoning

input frames & prompt objects

semantics
 proximity
 CF+SAM

Time = 0s

Time = 2s

Time = 3s

Time = 6s

Q: Compare these two frames from a video. The same object is highlighted with {init_c_name} contour in both. Carefully check for ANY of changes.

Q: Analyze the interaction between objects (Object 1 with {init_c_name} contour and Object 2 with {query_c_name} contour) in this image. Describe the interaction.

A: The blue object appears slightly repositioned upward and better aligned.

A: The blue box appears to be standing on top of the green platform, suggesting a stabilizing or settling motion.

A: - Frame-by-frame masks,
 - affected object metadata
 - state change events

spatiotemporal dynamics ?

what ?

when ?

how ?

why ?

where ?
